System Update

For system security and stability, it is recommended that users update the system using the `apt` command after installation.

The `/etc/apt/sources.list` file contains the list of software repositories used by the `apt` command. Before installing software, you should first update the package list using `apt`.

- Open a terminal and run the following command:

```
sudo apt update
```

```

```

- Next, upgrade all installed packages to their latest versions with:

```
sudo apt full-upgrade
```

Note: It is recommended to use `full-upgrade` instead of `upgrade`, as `full-upgrade` will also update dependency packages when dependencies change.

- After running `apt full-upgrade`, drivers, kernel files, and some system software may be reinstalled. It is recommended to manually reboot the device to apply all updates:

```
sudo reboot
```
